

SMART INDIA HACKATHON 2025

- **Problem Statement ID** – 25044
- **Problem Statement Title**- AI-Powered Crop Yield Prediction and Optimization
- **Theme**- Agriculture, FoodTech & Rural Development
- **PS Category**- Software
- **Team ID**- 97766
- **Team Name** - YieldExperts

“Empowering Farmers with AI for Smarter Yields”

FarmIQ – AI- Powered Crop Yield Prediction & Smart Advisory

PROBLEMS

- Uncertain yields
- Real-time advisory
- Crop losses from disasters & pests
- Limited access to financial planning & govt. schemes

OUR SOLUTION

- AI driven crop yield prediction
- Smart advisory system
- Mobile app (multilingual + voice support)

Unique Innovation

- Next Crop Recommendation
- Smart Disaster Alerts
- AI Chatbot
- Profit Calculator
- Subsidy Alerts
- Offline mode

How We're Different

Feature	Existing Solutions	FarmIQ
Yield Prediction	✓ Basic Only	✓
Next Crop Recommendation	✗	✓
Disaster Alerts	✗	✓
AI Chatbot (Local Language + Voice)	✗	✓
Profit Calculator	✗	✓
Subsidy Alerts	✗	✓
All-in-One Platform	✗	✓

Crop Yield Prediction:

TECHNICAL APPROACH

1. Programming Languages: Python (for ML model development)

2. ML Frameworks: Scikit-learn, XGBoost, TensorFlow

3. Data Sources: Historical yield datasets (ICRISAT, FAO, Kaggle), soil test data, weather API data

4. Database: PostgreSQL / MongoDB

5. Deployment: Flask / FastAPI API

Next crop Recommendations:

Programming Languages: Python / JavaScript

Rule-based System / ML Models: Decision trees, Random Forest, or expert rules based on crop growth stage

Data Sources: Soil health sensors, weather forecast APIs, pest/disease databases

Notifications: Firebase Cloud Messaging / Twilio for alerts

Visualization: Dashboards using Plotly or Chart.js

Weather Data Integration

APIs: OpenWeatherMap, Weatherbit, or IMD API (India-specific)

Programming Languages: Python / Node.js to process API data

Database: Time-series DB like InfluxDB or normal SQL DB to store historical weather

Data Processing: Pandas / NumPy for analysis

Farmer Input System

Frontend: React.js / Flutter / Android Studio (Java/Kotlin) for mobile app

Form Handling & Validation: HTML5, JavaScript, or Flutter widgets

Database: Firebase / MongoDB / PostgreSQL

Simple Farmer App (Multilingual + Voice Input)

Frontend Frameworks: Flutter / React Native (cross-platform)

Voice Input: Google Speech-to-Text API / Whisper

Language Support: iNLTK, Google Translate API for local languages

UI/UX: Material UI / Tailwind CSS

Offline Mode

Local Storage: SQLite / IndexedDB

Sync: Background sync (service workers or Flutter offline sync)

Conflict Handling: Merge local and cloud data when online

@SIH Idea

Feasibility & Viability

FarmIQ - Impact & Benefits
